1 Introduction

This document demonstrates the use of the `refsuite` package for managing references, bibliography, and indexes. All necessary files are created inline using the `filecontents` package.

1.1 References to Document Elements

The package automatically creates commands for short references. For example:

- Reference to a figure: Fig. 1 or Fig. 1
- Reference to a table: Table 1 or Table 1
- Reference to a section: Section 3 or Section 3

2 Main Content

2.1 Figures

Figure 1: Example figure with caption

As shown in Fig. 1, the package allows convenient referencing of graphic materials.

2.2 Tables

Column 1	Column 2
Data 1	Data 2
Data 3	Data 4

Table 1: Example table

According to the data in Table 1, conclusions can be drawn.

2.3 Using Bibliography

In scientific works, it is often necessary to cite sources [1]. For online resources, a separate bibliography is used [2].

2.4 Working with Indexes

You can add entries to different indexes:

Alpha notation Beta notation Typesetting system List of references Alpha-betical index

3 Conclusion

The `refsuite` package provides a convenient way to configure the reference, bibliography, and index system in LuaLaTeX. This standalone example shows how to use all features in a single file.
